

DUCTILE IRON GLOBE VALVE WITH BELLOW PN16/25 ICP DIN 3202-1 F1

Ductile iron globe valve flanged PN16/25 for common fluids of 2nd group, steam, thermic fluid.

Stainless steel bellow and graphite gasket.

Anti-turn device to avoid the risk of torsion of bellows.

Pressure equalizing plug in DN200

Bolted bonnet and packing for an easy maintenance.

Compatible with explosive atmosphere, ATEX Zone 1&21 and Zone 2&22.

Certificate
3.1

Size : DN15 to DN200

Connection : Flanged PN16/25 RF

Min Temperature : -10°C

Max Temperature : +350°C

Max Pressure : 25 bars up to DN50 (16 bars over)

Specifications : Non rising stem

Stainless steel bellow

Bolted bonnet and packing

Materials : Ductile iron EN GJS-400-18

DUCTILE IRON GLOBE VALVE WITH BELLOW PN16/25 ICP DIN 3202-1 F1

SPECIFICATIONS :

- Respect the flow direction indicated by the arrow
- Non rising stem
- Bolted bonnet and gland pack
- Stainless steel bellow
- Pressure equalizing plug in DN200
- Pressed seat in the body
- Anti-turn device to avoid the risk of torsion of bellows
- Flanges R.F. PN25 up to DN50, PN16 over
- RAL 9006 grey painting, 40µm thickness

USE :

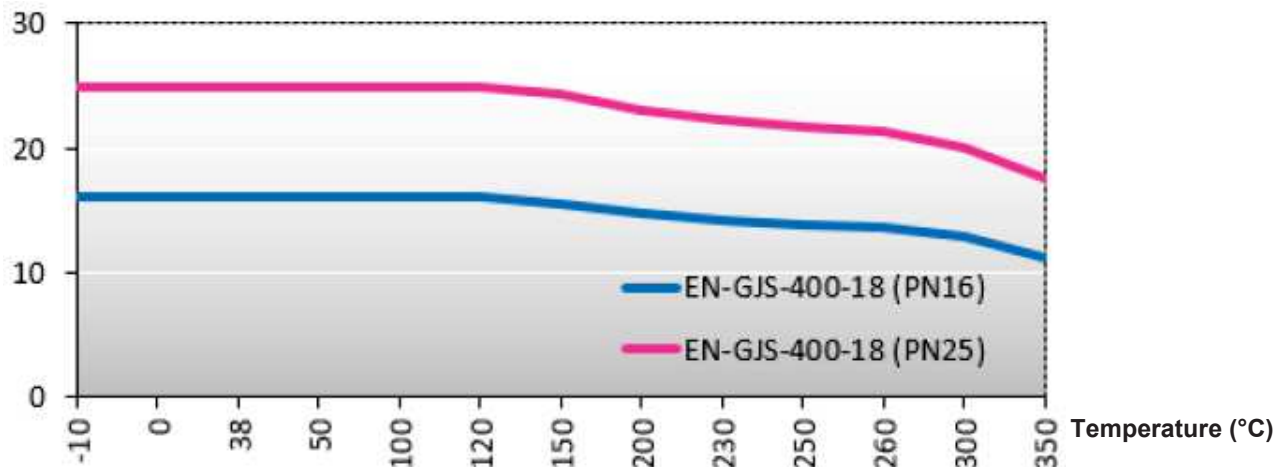

- Common fluids of 2nd group , steam , thermic fluid
- Min and Max Temperature Ts : - 10°C to + 350°C
- Max Pressure Ps : 25 bars up to DN50, 16 over (see graph)
- Δp 16 bars max for DN125, 15 bars max for DN150, 16 bars max for DN200
- Keep greased the stem

FLOW COEFFICIENT Kvs (M3 / h) :

DN	15	20	25	32	40	50	65	80	100	125	150	200

DUCTILE IRON GLOBE VALVE WITH BELLOW PN16/25 ICP DIN 3202-1 F1**STANDARDS :**

- Manufacturer certified ISO 9001 : 2015
- DIRECTIVE 2014/68/EU : CE N° 0035
Risk category III Module H
- Certificate 3.1 on request
- Designing according to DIN 3840
- Marking according to EN 19
- Pressure Tests according to EN 12266-1, Rate A
- Length according to EN 558 series 1 (DIN 3202-1 F1)
- Flanges R.F. according to EN 1092-2 PN16-PN25
- ATEX Group II Category 2 G/2Dc Zone 1 & 21 Zone 2 & 22 (optional marking) according to directive 2014/34/EU

DUCTILE IRON GLOBE VALVE WITH BELLOW PN16/25 ICP DIN 3202-1 F1

INSTALLATION INSTRUCTIONS**GENERAL GUIDELINES :**

- Ensure that the valves to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the valves to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

INSTALLATION INSTRUCTIONS :

- **Before installing the valves, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the valves.
- **Ensure that both connecting pipes either side of the valve (upstream and downstream) are aligned (if they're not, the valves may not work correctly).**
- **Make sure that the two sections of the pipe (upstream and downstream) match, the valve unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the valve and can even cause a rupture.** To be sure, place the kit in position to ensure the assembling will work.
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the valve.**
- Tighten the bolts in cross.
- It's recommended to operate the valve (open and close) 1 to 2 times per year
- Tighten the gland packing at the first start of the installation (with a moderate torque) so that there's no leakage and the handwheel is easy to operate.
- Do not use tools to operate the handwheel
- Respect the flow direction indicated by the arrow
