

SANITARY TANK BLANKETING REGULATORS BKR

(Low pressure regulator)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently product losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition.

The blanketing process consist in covering the stored medium , usually a liquid, with a gas (normally N2).

MAIN FEATURES

Compact design.

Completely machined from barstock material, no castings or forgings are used on the standard version.

No rising stem

STANDARD SURFACE FINISH

Internal wetted parts: $\leq 0,5$ micron Ra

External : $\leq 0,8$ micron Ra

(0,25 micron Ra and electro polished as option)

Ultrasonic cleaning

OPTIONS:

Leakage line connection 1/8" (captured vent)

Gauge connection on body

External pulse lines (recommended for low set pressures < 10 mbar or high flow)

Dome loaded (for higher pressure control)

Angle connection design

Blanketing with vacuum

USE:

Compressed air, nitrogen and other gases compatible with the construction.

AVAILABLE

MODELS:

BKR – Low pressure regulator

SIZES:

DN 1" – DN25

OUTLET SPRING

RANGES:

5 to 500 mbar (4000mbar with dome load)

CONNECTIONS:

Clamp ends or others on request

PACKAGING:

Assembling and packaging in a clean room certified according to ISO 14644-1.

The product is end capped and vacuum sealed with recyclable plastic film to avoid contamination.

INSTALLATION:

Vertical installation recommended (to allow draining) or horizontal as close to process as possible in order to prevent long pipe sections and flow restrictions.

For an economical consumption of blanketing gas the pressure must be adjusted to remain slightly above the atmospheric pressure, while filling and emptying the vessel. See IMI.

ORDER

REQUIREMENTS:

Type of fluid

Maximum operating temperature

Inlet pressure and required outlet pressure

Capacity (maximum and minimum).

LIMITING CONDITIONS

Valve model	BKR
Body design conditions	PN 16
Max.upstream pressure	6 bar
Max.downstream pressure	500 mbar
Min.downstream pressure	5 mbar
Max.design temperature *	130 °C

*Other on request.

CAPACITIES in Nm3/h (air)

Inlet pressure bar	0,5	1	2	4	6
Outlet pressure 5 to 500 mbar	20	40	63	102	140

Outlet pressure should not be more than 50% of inlet
Spring ranges: 5-10; 10-50; 20-200; 50-500 mbar

CE MARKING (PED - European Directive 97/23/EC)

PN 16	Category
DN 1" - 25	SEP - art. 3, paragraph3

DIMENSIONS (mm)

SIZE DN	A	B	C	D	WGT. Kgs
1" -25	210	47	243	265	9,5

Dimensions based on ASME BPE clamped ends

Different dimensions and standards on request.

Consult factory for certified dimensions

Dimensions subject to change without notice

MATERIALS

POS.	DESIGNATION	MATERIAL
1	Valve body	AISI316L / 1.4404
2	Actuator	AISI316L / 1.4404
3	Seat cover	AISI316L / 1.4404
4	* O-ring	EPDM
5	*Piston	AISI316L / 1.4404
6	* Valve head	EPDM
7	* O-ring	EPDM
8	*Valve spring	AISI302 / 1.4300 (Polished)
9	Stem	AISI316L / 1.4404
10	Stem guide	PTFE
11	Retaining ring	St. steel A2
12	* O-ring	EPDM
13	Bolts	St. steel A2-70
13A	Nuts	St. steel A2-70
14	Spring cover	AISI316L / 1.4404
15	* Lower diaphragm	PTFE
15A	* Upper diaphragm	VITON
16	Diaphragm plate	AISI316L / 1.4404
17	Nut	St. steel A2-70
18	Lower spring guide	AISI316L / 1.4404
19	* Regulating spring	AISI302 / 1.4300
20	Top spring plate	AISI316L / 1.4404
21	* O-ring	EPDM
22	Regulating nut	AISI316L / 1.4404

* Available spare parts.

Remarks: FDA/USP Class VI seals certificate on request

All valves have a serial number. In case of non-standard valves this number must be supplied if spare parts are ordered.

Typical installation

Supply 1 – 6 bar

Blanketing with overpressure

Blanketing valves are not substitute of safety valves or vacuum relief valves
